Haven PRD

Oct 19, 2026 · @Athar Ali

What is Haven

Haven lets anyone report a problem by text, voice, or photo and get safety steps, rights, and ready documents in seconds. A human control room reviews every case, accepts it, and sends the right team. The user tracks progress live.

Core principle: AI suggests, humans decide. The AI never makes the final call on urgency, dispatch, or legal action.

Haven does not replace the police. Call 15 (Police) and Call 1099 (Human Rights Helpline) buttons are always visible.

Problem and goals

The problem

- Many people, especially women, do not report harassment or threats. They are afraid or do not know their rights.
- Civic issues like roads and drains have no clear route to the right department.
- Many people cannot type well and prefer to speak Urdu, Sindhi, or English.
- In danger, people do not know what to do in the first minutes before help arrives.
- Filing an application or FIR is confusing.

Goals

1. One simple place to report any problem, with the highest focus on safety.
2. Voice complaints in Urdu, Sindhi, and English.
3. Fast, consistent urgency rating with human review.
4. Safety steps right away while help is on the way.
5. Rights in plain words, plus ready documents.
6. A control room that puts Critical cases first and tracks every case to the end.
7. Strong privacy and abuse protection.

Non-goals

- Haven does not replace police or emergency services. It always offers one-tap calling.
- The AI gives no final legal judgment. All legal text is general guidance, not a substitute for a lawyer.

- Haven does not promise a rescue time. It shows only the estimate given by the dispatcher.

Users and roles

Role	What they do
Citizen	Files complaints, gets guidance and documents, tracks status. Can stay anonymous to the public but is verified internally.
Control Room Admin	Reviews cases, confirms or changes urgency, accepts or rejects, assigns teams.
Response Team	Gets assigned cases, shares status and arrival time, closes the case with notes.
Department Officer	Handles civic cases: roads, drains, water, and sanitation.
SuperAdmin	Manages users, roles, settings, audit logs, and the legal and playbook content.

Categories and urgency

Two tracks. **Safety and Justice** gets the highest focus. **Civic** gets lower focus.

Track	Categories
Safety and Justice	Harassment (street, workplace, online, stalking), threats and blackmail, domestic violence, theft and robbery, property and neighbor disputes, fraud and scams, missing person, other personal safety issue
Civic	Road damage, drainage and sewage, garbage and sanitation, water and electricity, street lights

Urgency	Meaning	Example	Handling
Critical	Life or safety in immediate danger	"Someone is following me now"	Instant alert to admin, call buttons, safety steps first

Urgency	Meaning	Example	Handling
High	Serious, needs action within hours	Ongoing harassment, blackmail	Top of queue, human review right away
Medium	Needs action within days	Dispute, fraud already done	Normal queue
Low	Not urgent	Pothole, broken street light	Routed to department and tracked

Danger rule: any danger signal (threat, weapon, "following me", "help") raises the case to at least High and triggers human review within minutes. Danger signals can only raise urgency, never lower it.

Key features

Citizen app

- OTP login. Call 15 and Call 1099 buttons on every screen.
- Report by typing, speaking, or adding a photo. Pick a category or let the AI detect it.
- Location by GPS with manual correction. Choose anonymous to the public or named.
- "I am in danger right now" button that skips the form and sends a quick alert with location.
- Case tracking, my cases, and language settings.

AI help (AI suggests, humans decide)

- Voice to text in Urdu, Sindhi, and English. The user confirms or edits the text.
- Summary, category, and urgency with reasons.
- Danger keyword rules run first and can only raise urgency.
- If the AI fails, the case becomes High priority and the user still sees emergency buttons and default safety steps.

What the user gets right away

- **Stay safe now:** short steps from safety playbooks we write and curate. The AI picks a playbook and never invents steps.
- **Know your rights:** plain-language explanation from legal content we curate from official law text. Every answer shows the law and section, with the note "General guidance, not a substitute for a lawyer."
- **Your documents:** complaint application and evidence checklist as PDF. FIR draft comes later.

Control room (admin)

- Live queue sorted by urgency, with a sound alert for Critical cases.
- Case detail with summary, original message, photos, map, and AI reasons.
- Accept, reject with a reason, change urgency, and assign a team with an arrival estimate.
- Team management, map view, audit logs, and a content manager where the SuperAdmin edits playbooks and legal entries.

Abuse prevention and privacy

- OTP for every account, rate limits, and a duplicate check. Admins can reject with a reason and users can appeal.
- A clear warning that false complaints can lead to suspension and legal action.
- Anonymous mode, role-based access, encryption, a full audit trail, and audio deleted after the retention period.

Partners: only the emergency numbers (15 and 1099) and an SMS provider.

MVP and later

The MVP is the smallest version that shows the full safety loop: report, urgency, safety steps, human review, status.

Stage	What is included
MVP (first demo)	Text and voice complaints, AI summary and urgency with reasons, 3 playbooks (harassment, theft, one civic), one complaint application, Call 15 and 1099 buttons, admin queue with accept or reject, status updates, OTP and rate limits
Next	FIR draft, team assignment with map and arrival estimate, Sindhi voice, SMS updates, full anonymous mode
Later	Live team tracking, hotspot analytics, trust scoring and advanced abuse detection, offline and low-network mode
